

SINEAX VK 636

Programmable Temperature Transmitter with PROFIBUS-PA protocol

for installation in the terminal head of a temperature sensor DIN 43 729, shape B

Application

The **SINEAX VK 636** is a temperature transducer for use in automation systems with PROFIBUS.

It converts the measured value, i.e. the signal from a thermocouple or a resistance thermometer to the PROFIBUS-PA format.

PROFIBUS-PA (Process Automation) is an open field bus standard according to EN 50 170 and IEC 61 158-2 that requirements of the process industries.

Both the communication and power supply are via the bus conductors.

The measured variables, ranges and other parameters can be configured and set on a PC (Master Class 2) running the respective configuration software.

Fig. 1. Measuring transmitter SINEAX VK 636 with PROFIBUS-PA protocol.

Programmable Temperature Transmitter with PROFIBUS-PA protocol

Configurations and settings

A Master Class 2, the basic device file (GSD), the device description (DD) and the respective configuration software are needed to configure and set the transmitter. The hardware required includes a DP cable, a bus coupler and an ancillary two-wire cable.

The connections between "Master Class 2 ↔ bus coupler ↔ SINEAX VK 636" can be seen from Fig. 2.

The bus coupler compensates the level between RS 485 and IEC 61 158-2 and also establishes the power supply connection between the Master Class 2 and the SINEAX VK 636 transmitter.
